## **DETAILED ACTION**

### ***Drawings***

Figure 2, 7a-7d, and 8a should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g).

In Figure 8c, "Defliction" should be -- Deflection --.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claims 1 and 6, line 2, "compressing" should be -- comprising --.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Japanese Patent 4-153424A to Imai. Imai discloses an earthquake-resistant, multi-story steel building comprising V-shaped, tension only braces (5) made of high strength tensile force wires. A non-column space (B3) is formed on the first story.

***Relevant Prior Art***

Japanese Patent 5-71242 discloses a vibration control apparatus for a building comprising V-shaped tie members. US Patent 5845438 to Haskell discloses a V-shaped brace apparatus and slider member for applying damping forces to the structure during an earthquake.
